

-22-

What is claimed is:

1. A method for identifying an agent which destabilizes lysosomes to increase oncogenic or aberrant protein degradation comprising contacting a lysosome or a cell
5 containing a lysosome with an agent and detecting whether said agent destabilizes the lysosome thereby increasing oncogenic or aberrant protein degradation.

2. An agent identified by the method of claim 1.

3. The agent of claim 2, wherein said agent comprises
10 chloroquine or a derivatives, analog, or enantiomer thereof.

4. A method for increasing oncogenic or aberrant protein degradation in cells comprising contacting cells with an effective amount of an agent which destabilizes lysosomes thereby increasing the degradation of oncogenic or aberrant
15 proteins.

5. The method of claim 4, wherein the agent comprises arsenic, all-trans-retinoic acid, chloroquine or a derivative or a combination thereof.

6. A method for treating a disease or condition
20 associated with an oncogenic or aberrant protein comprising administering to a patient in need of treatment an effective amount of an agent which destabilizes lysosomes so that oncogenic or aberrant proteins degradation is increased thereby treating the disease or condition associated with the
25 oncogenic or aberrant protein.

7. The method of claim 6, wherein the agent comprises arsenic, all-trans-retinoic, chloroquine or a derivative or combination thereof.
